

Drive Components

Sprockets

With their positive engagement, sprockets eliminate the possibility of slippage on the drive shaft that can occur on a friction drive system. All sprockets are available in stainless steel or polyacetal plastic. The table below shows the available pitch diameters and number of teeth for each belt pitch.

Cage Rollers

This positive drive system is often used for chain edge belts. In addition to driving the chain edge, this drive system also engages the belt across the entire belt width. Cage rollers are an excellent choice for applications that require a sanitary and hygienic drive system.
